DOE Atmospheric Radiation Measurement program mobile facility moves to Niger

19.12.2005

[next article](#) >**Sandia researcher Mark Ivey spends a week in Africa on site survey for climate monitoring equipment**

After a six-month stint taking cloud and aerosol measurements at Point Reyes National Seashore on the California coast, a mobile suite of climate monitoring equipment was moved to Niamey, Niger, in October for a year's deployment there.

Going along to help survey the site and prepare for the deployment of the climate monitoring equipment was Sandia National Laboratories engineer Mark Ivey, who spent a week in the West African country. Sandia is a National Nuclear Security Administration lab.

ARM - for Atmospheric Radiation Measurement - is the largest global climate
